

North Shore Hospital Lakeview Emergency Department and Assessment and Diagnostic Unit

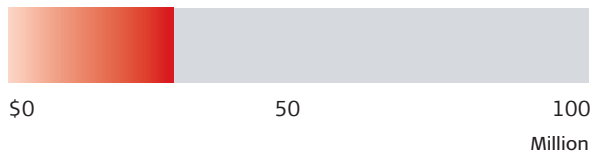

PROJECT | PUBLIC HEALTHCARE

Client: Waitemata District Health Board

Location: North Shore Hospital
North Shore, Auckland

Project Duration: Mid 2008 – current (due for completion October 2011)

Construction Value:

This project is for a new 3-storey building extension at the end of the main podium, at North Shore Hospital. It includes the replacement of the existing ground floor Emergency Department with an Assessment and Diagnostic Unit and a new Emergency Department located in the new wing. Lower ground floor areas provide Staff Offices and Facilities.

The Lakeview building is situated in the eastern corner of the North Shore Hospital site, overlooking Lake Pupuke with extensive views both to and from the lake. The design maximises the potential of this beautiful site and deals sensitively with the urban design considerations of its prominent location.

The Lakeview project included consideration of the development of a future hot floor with new CCU, additional Cath Labs and ICU/HDU modifications.
